REC_DS using C_Week 4_COD_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue. Delete an element from the queue. Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

Input Format

Each line contains an integer representing the chosen option from 1 to 3.

01428

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

Output Format

For option 1 (insertion):-

- 1. The program outputs: "<data> is inserted in the queue." if the data is successfully inserted.
- 2. "Queue is full." if the queue is already full and cannot accept more elements.

For option 2 (deletion):-

- 1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
- 2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

- 1. The program outputs: "Elements in the queue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
- 2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

040101428

```
240707428
Output: 10 is inserted in the queue.
    Elements in the queue are: 10
    Invalid option.
    Answer
    #include <stdio.h>
    #include <stdlib.h>
    #define max 5
    int queue[max];
    int front = -1, rear = -1;
// You are using GCC int insertq(int *data)
      //Type your code here
      if(rear==max-1){
        return 0;
      }
      else{
        if(front==-1){
           front=rear=0;
        queue[front]=*data;
       }else{
           rear+=1;
           queue[rear]=*data;
        return 1;
      }
    }
    int delq()
      //Type your code here
      if(front==-1){
       printf("Queue is empty.\n");
        return -1;
```

```
printf("Deleted number is: %d",queue[front]);
front=rear=-1;}
else{
printf("Deleted number is: %d",queue[front]);
       32%
else{
          if(front==rear){
                printf("Deleted number is: %d",queue[front]);
                front+=1;
             }
             return 0;
     }
void display()
        //Type your code here
        if(front==-1){
          printf("Queue is empty.\n");
        }
        else{
          printf("Elements in the queue are: ");
          for(int i=front;i<=rear;i++){</pre>
             printf("%d ",queue[i]);
          printf("\n");
 int main()
        int data, reply, option;
        while (1)
          if (scanf("%d", &option) != 1)
             break;
          switch (option)
             case 1:
                                                              240101428
                if (scanf("%d", &data) != 1)
                   break;
                reply = insertq(&data);
                if (reply == 0) \bigcirc
```

```
printf("Queue is full.\n");
    else
        printf("%d is inserted in the queue.\n", data);
        break;
    case 2:
        delq(); // Called without arguments
        break;
    case 3:
        display();
        break;
    default:
        printf("Invalid option.\n");
        break;
}
return 0;
}
```
